Wattwise Solutions LLC

Ambient Air Monitoring Station

WW-AIR-001

A stationary air monitoring configuration bringing together analyzers for routine ambient air quality parameters. The station is intended to produce representative measurements at a monitoring location and support regional air quality assessment. Instrument selection and the final station configuration depend on the parameters required by the monitoring program.

Applications

• Ambient air networks

• Regional air quality assessment

• Stationary monitoring

Technical data

Specifications vary with model and configuration. Contact Wattwise to confirm suitability, measurement ranges and available options for your project.
