Wattwise Solutions LLC

High-temperature high-pressure valve

WW-CMP-115

A diaphragm-based valve for analytical fluid paths exposed to demanding temperature, pressure or chemical conditions. Corrosion-resistant wetted materials are selected to suit reagent contact, including strong acids and alkalis. The final valve materials and operating conditions should be specified as part of the instrument configuration.

Applications

- Analytical fluid control
- Reagent handling

Technical data

Power supply	24 VDC / 5.2 W
Operating temperature	5–180 °C

Specifications vary with model and configuration. Contact Wattwise to confirm suitability, measurement ranges and available options for your project.
