Wattwise Solutions LLC

Ultrasonic flue gas flow meter

WW-IND-107

An ultrasonic instrument combining stack velocity, temperature and pressure measurement. Its line-velocity method supports flow measurement in wet, corrosive or dusty exhaust streams within the specified operating conditions. A compact insertion assembly, local settings and digital or analog outputs simplify integration into industrial monitoring systems.

Applications

• Industrial exhaust monitoring

• Boiler systems

• Drying processes

Technical data

Measurement range	1–60 m/s
Interface	RS485 / 4–20 mA
Operating temperature	−20–50 °C

Specifications vary with model and configuration. Contact Wattwise to confirm suitability, measurement ranges and available options for your project.
